

# TrapGuard<sup>®</sup>

## Waterless trap seal device

**Water passes through.  
Bugs, odors, and sewer  
gases stay out.**

The TrapGuard waterless trap seal device solves the problem of loss of trap seal with a simple, elegant design that mitigates evaporation and blocks harmful sewer gases and/or pests from entering a finished building space.

While traditional methods to mitigate the loss of trap seal — such as trap primers — can prove costly and may require routine maintenance, the TrapGuard waterless trap seal device dramatically improves performance while simplifying installation and cutting costs.

Featuring an elastomeric, flexible PVC tube with a self-closing trap curl, the Trap Guard will indefinitely retain its shape except when water is passing through.

TrapGuard remains only waterless trap seal device on the market that can withstand minimal back pressure, in some circumstances preventing raw sewage from backing up into habitable areas.

The Trap Guard meets ASSE 1072 test standards and is in compliance with the International Plumbing Code, International Residential Code, Uniform Plumbing code, and National Plumbing Code of Canada.

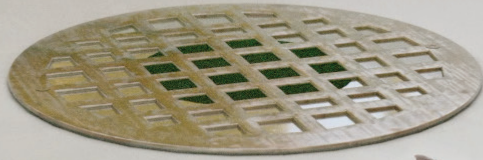

- Reduces project materials costs
- Cuts labor costs and requirements
- Speeds and simplifies installation

- Easy installation
- Keeps bugs and gasses out
- Can withstand minimal back pressure

Prevent bugs from entering a finished building space.

Mitigate water evaporation which can lead to harmful sewer gases from escaping the drain.

Can withstand minimal back pressure, in some circumstances preventing raw sewage from backing up into habitable areas.

Allows a flow rate of up to 34 GPM [in 3" drains] and has excellent resistance to common cleaning solutions and household chemicals.

## LET US HELP YOU WITH DWV INNOVATIVE SOLUTIONS

The TrapGuard floor drain is designed for easy installation and provides long-term protection and peace of mind. Let us know how we can help you with your DWV system.
