

Washing Machine Connections

Important Notice: Washing machines used to require separate riser connections because of suds backing up into other plumbing fixtures. Now, all new washing machines are required to use the High Efficiency detergents which produce no suds since the year 2000.

Important Change: After 17 years ProVent's 2017 design manual has changed the separate stack requirement of connecting washing machines. The new design manual now allows the same normal ProVent piping connections for washers as any other 2 fixture unit rated plumbing fixture.
